DETAILED ACTION

Drawings

1. The formal drawings filed on 10/30/2001 are accepted.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

2. Claims 1, 5, 6, 10, 11, 15 are rejected under 35 U.S.C. 102(a) as being anticipated by Nguyen (USPN 6,069,471).

Regarding to claims 1, 6, 11, Nguyen discloses a drive circuit for driving a switching element (see figures 1 and 2) comprises a high-side switching circuit (112) connected between power supply line (Vdc); a low-side switching circuit (114) connected in series with the high-side switching circuit through an output terminal (110); a voltage detector (106) detecting a voltage appearing at the output terminal (110), wherein the low-side switching circuit is controlled to be turned off when the voltage detected by the voltage detector is lower than the predetermined value of the switching element (114)(see col. 1, lines 59-60), and wherein the high-side switching circuit is turned off when the voltage detected by the voltage detector is higher than a predetermined threshold (see cols 1 and 2, lines 54-3).

Regarding to claims 5, 10, 15, Nguyen discloses the voltage detector is implemented by a voltage divider (resistors 351 and 352).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 2-4, 7-9, 12-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nguyen in view of Kato (USPN 6,316,999). Nguyen discloses the low-side switching, and the high side switching circuits (112, 114) include a comparing circuit (310) comparing the output voltage detected by the voltage detector with the off state decision voltage, and a logic circuit (308), a pre-driver (320), a decision transistor (312). Nguyen does not disclose an output transistor. Kato discloses an output transistor (including M70 and M70a shown in figures 1 and 2). It would have been obvious to one having skill in the art to combine the circuit of Nguyen with an output transistor in order to prevent both high and low transistor being off at the same time (Kato, col. 17, lines 28-30).
